BAG-INTEL (19)

Intelligent system for improved efficiency and effectiveness of the customs control of passenger baggage from international flight arrivals

Raquel Pastor (ISDEFE)

CoU Spain – Plenary Meeting

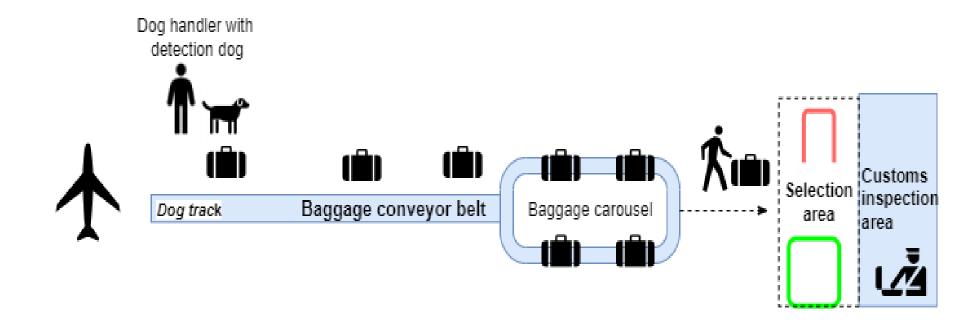

Centro para el Desarrollo Tecnológico y la Innovación (CDTI), Madrid, Spain 18 February 2025

BAG-INTEL: challenge addressed

Current Customs Control Practices at International Airports: Drawbacks and Insights

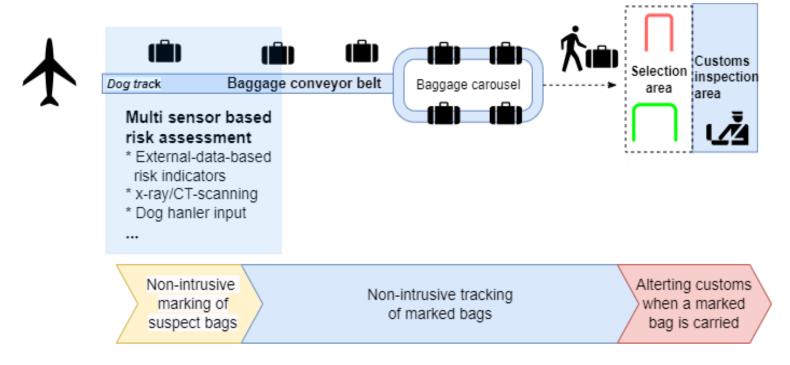

Al-powered BAG-INTEL solution

The BAG-INTEL Approach

Streamlining Customs Operations

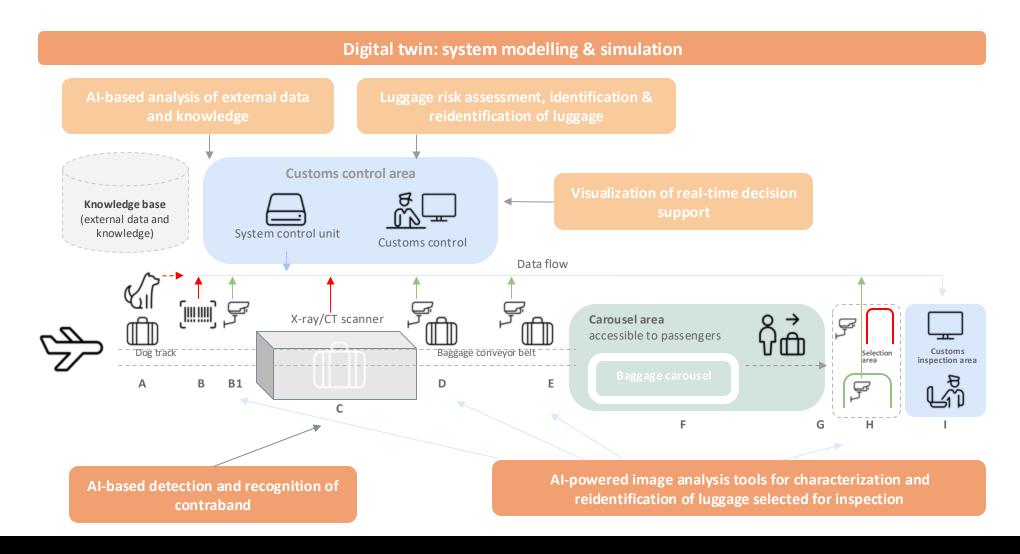

Identification of bags suspcted to contain contraband, tracking such bags, and alerting the customs when they are carried into the customs place at the exit of the baggage delivery space

Revolutionising customs operations at international airports

The BAG-INTEL system overview

Main technical aspects of the solution

- BAG-INTEL represents a significant leap in airport security by leveraging IoT, AI, and multi-cloud technology
- It provides a scalable and secure solution to modernise airport operations
- It has a potential for wider applications in other high-security environments

Advancing the state of the art

THE BAG-INTEL SOLUTION

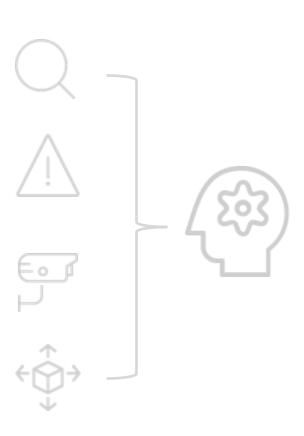

Implementing the BAG-INTEL solution with its advanced features and capabilities, including:

- Al-powered functionality for enhanced detection of contraband in X-ray scanning of luggage,
- Al-powered risk assessment based on the analysis of data from external sources (Passenger Name Record and Law Enforcement Agencies),
- Al-camera-based end-to-end reidentification of luggage, and
- digital twin for system visualization and performance optimization,

will lead to greater effectiveness and efficiency of the customs control processes!

- √ The cases of manual inspection not leading to finding contraband will decrease as only luggage containing contraband will be inspected manually.
- ✓ More contraband will be detected as more luggages containing contraband will be flagged.
- ✓ Besides, the **Al-camera-based reidentification is non-intrusive**, avoiding all the disadvantages of alternative solutions.

Technical aspects of the solution

BENEFITS AND IMPACT

Enhanced security

multilayer architecture and real-time data processing (reduces threats)

Operational efficiency

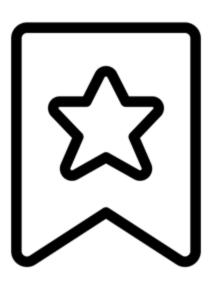

automated systems decrease human workload (reidentification and scanning of bags)

Scalability

adaptable to other security-sensitive sectors

Proposes a unified model

which can be used to set the new standards in EU airports and introduce a harmonized solution
